

# MILTECH™ 471

## Military Rugged USB-2/3 to Ethernet Smart HUB

The MILTECH 471 Module is a member of ISPDS (Integrated Soldier Power and Data Management Systems) product line. This unit provides connectivity for 5 external USB2/3 devices (e.g. Tablets/Smartphones) and 2 external 10/100/1000BT Ethernet ports. Using its integrated Ethernet Switch and USB/Ethernet bridges the MILTECH471 allows network connectivity to all five external USB2/3 ports while providing simultaneous fast charge functionality based on USB Power Delivery technology.

With a wide input range of 18-48VDC MIL-STD-704, MILTECH 471 supports fast charge for USB devices (x5) over all ports - up to 100W for 4 ports and 60W for the fifth port. The Ethernet interfaces allow the USB host machines to communicate between themselves and upstream devices over a standard wired Ethernet network, further extending the flexibility of the hub and attached USB devices.

MILTECH™ 471 features mechanical packaging enhancements designed for MIL-STD-810F airborne and ground environmental compliance and high reliability. The unit has been specially hardened to improve ingress, impact, and shock/vibration protection. Passive cooling allows for the elimination of moving parts. Sealed connectors ensure protection against water and dust.

This flexible communications and power management platform creates another “first” for the military and rugged commercial markets. It extends our commitment to unique, tailor-made low-SWAP rugged communications solutions
