Functions and Signals

INHIBIT (connector J2, pin 3)

Description: The **INHIBIT** signal is used to turn the power supply ON and OFF.

Operation: Applying “1” or leaving open will turn the power supply ON.

Applying “0” or shorting this pin to **OUT RTN** will turn the power supply OFF.

For constant operation, leave this pin unconnected.

Signal Type: 5V TTL or dry contact (open/short).

Return line: This signal is referenced to **OUT RTN** (connector J2, pins 4-8, 16-20).

SYNC (connector J2, pin 2)

Description: The **SYNC** signal can be used to allow the power supply switching frequency to synchronize with a system clock.

Operation: Apply a square wave clock with frequency in the range of 250 kHz \pm 10 kHz and duty-cycle of 50% \pm 10%, TTL level.

If not required, leave open. The power supply will work at 250 kHz \pm 10 kHz (internal clock).

Signal Type: 5V TTL

Return line: This signal is referenced to **SYNC RTN** (pin 15).

SENSE (connector J2, pin 1)

Description: The **SENSE** function is used to achieve accurate load regulation at load terminals.

Operation: Connect the pins directly to the load terminals.

The correction ability is limited to 2 to 10% of nominal voltage output, and up to 2 V.

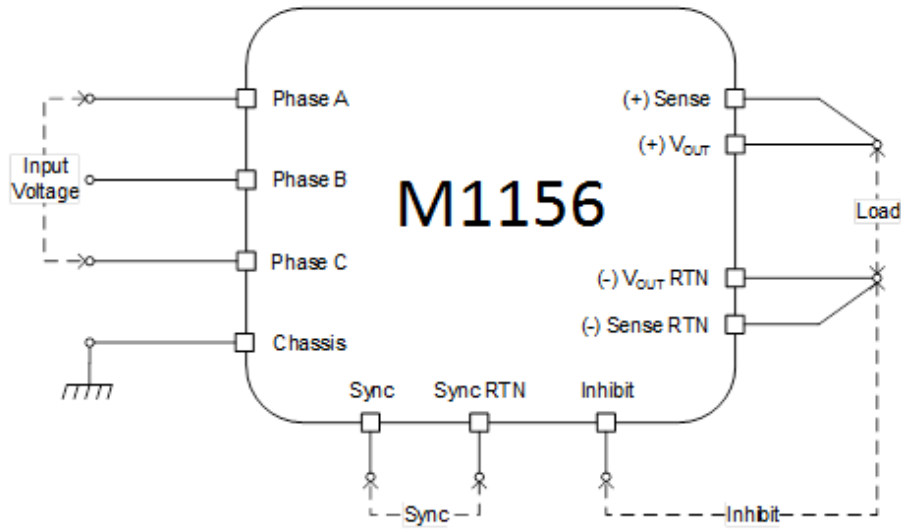

Note that if sense correction function is not needed, the sense lines must be shorted to their respective output pins: **SENSE** (pin 1) to **OUT** pins (9-13, 21-25) and **SENSE RTN** (pin 14) to **OUT RTN** (pins 4-8, 16-20).

Signal Type: 5V TTL

Return line: This signal is referenced to **SENSE RTN** (connector J2, pin 14).
